this repository

<https://github.com/easyw/kicad-3d-models-in-freecad/>

is a place to find STEP AP214 3D models and VRML kicad 3D models under '**cadquery**'

**DIR**, there are some nice scripts that can generate

**STEP and VRML parametric models** for

**GullWings ICs, DIP ICS, pin-strip headers**

All the STEP and VRML models can be used with kicad new stable release (August 2015) and are ready to be used with Kicad StepUp script

**kicad StepUp** is a new approach to export kicad board and modules in STEP AP214 (with colors). With kicad StepUp it is possible to export the 3D board and modules in STEP for MCAD interchange and create the 3D wrl libraries.

## Overview of the parametric scripts

this repository

<https://github.com/easyw/kicad-3d-models-in-freecad/>

is a place to find STEP AP214 3D models and VRML kicad 3D models;

under '**cadquery**' **DIR**, there are some nice scripts that can generate

**STEP and VRML parametric models** for

**GullWings ICs, DIP ICs, pin-strip headers** ready to go for **kicad StepUp script**

The parametric scripts are derived from CadQuery scripts for generating QFP, DIP and pinHeaders models in X3D format.

<http://freecadweb.org/>

## 1. Running the scripts

to run the script just do:

freecad make\_gw\_export\_fc.py modelName

examples:

- c:\freecad\bin\freecad make\_gw\_export\_fc.py SOIC\_8
- c:\freecad\bin\freecad make\_gw\_export\_fc.py all

modelName and parameters are described in:

1. cq\_params\_gw\_soic.py file for defining SOIC mechanical data
2. cq\_params\_gw\_qfp.py file for defining QFP mechanical data
3. cq\_params\_gw\_ssop.py file for defining SSOP mechanical data
4. cq\_params\_gw\_tssop.py file for defining TSSOP mechanical data
5. cq\_params\_gw\_sot.py file for defining SOT mechanical data

all data in parameter files are collected from components data sheets

*the script will generate STEP and VRML parametric models* ready to be used with kicad StepUp script
